1. INTRODUCTION

Whole World is going through with very tough times as WHO declares COVID 19 a Pandemic Disease. Now this is a time when there is a need of Shared Solution for COVID 19 at World Wide level out of the Copyright and Patent, looking at the trend of the virus that is going on, It seems that it is not a general virus that is changing its trend according to the condition of the Country, every Country has its own environment, every Country has its own geographical structure, a country with a more heated environment, Some countries with a warmer environment and some of the countries are cold , Not either of the Country is too hot, but this virus is showing its impact World Wide, if there is a lock down in a country, it has a lot of impact, but some of the Countries has a lot of influence, so it supports the formula that the gene needs to be linked with the environment and now a new question is created here. Is there a number of Adaptations or Optimizations in this Virus? And if this is the kind of a thing in it, then what can happen in the natural virus? Or can the virus in the lab have adaptation or optimization? It is a question that makes Virology more empowered, which requires more study or study, so from the very beginning we have been a little weak in terms of viruses, whether it is the VIRUS of SARS or AIDS and now the Covid-19 virus , the way the virus is trending, it is thinking that if it is showing the action of adaptation, then if it is showing the action of adaptation. It will also see a change in the composition of the process of adaptation of the people in which any human or micro-organism must change something to reconcile with the environment around it, So that it can survive to adapt to the environment if the media report is taking the people into effect from many of the many feet away, then there is a need to make a study of the virus and its adaptation, and then the question arises, does the vaccine being made by any country can be applied to other countries also , While we know that the virus is a way to adjust to the adaptation or environment?

2. CORONA COPYRIGHT OR PATENT GLOBAL STRATEGY REQUIREMENT (QUININE, CHLORINE AND SOME BIRDS MAY BE EFFECTIVE IN WHICH MARTIN BIRDS (ABABEEL BIRDS)

Martin Birds (Ababeel Birds)

Sourced by: (Shetty, 2017)

Sourced by: (Bull, 2016)

Corona today has come to the world as a Global disease Developed Countries or Developing Countries or Poor Countries all is suffering from this disease, The reason why it is likely to be a global information exchange on this disease is necessary. There is a need to have a comprehensive research beyond copy right, patent, monopoly, in which every information associated with the virus is shared on the world table, which can provide some solution to this Global problem. Chlorination helps to Increase the Immunity in Human Body and there is a need to Prepare Diet Chart (Fruits & Vegetables) to Increase Immunity in Humans. To find some solution to COVID-19, which I am starting in the beginning, it seems that quinine, chlorine and some birds can be effective in COVID-19, like Martin Birds (Ababeel Birds) is dominant, which requires Extensive Research, both quinine and chlorine are considered to be very effective and in the initial efforts its combination with Azithromycin has been considered effective, Chlorine is considered to be a good disinfectant , but it cannot be given directly to the patient as it must be dangerous, due to this the medicine of Hydroxychloroquine, especially in Malaria, is being given to Corona patients in many Countries today (Dai et al., 2019).

Sodium Chloride (NaCl) and Potassium Chloride(KCl) is present in Bird Food. Purple Martins have an insectivorous diet, eating primarily flying insects such as moths, gnats, flies, and mosquitoes. And Mosquitoes, the major components of the oil were fenchone (6.0%), piperitone oxide (32.4%), piperitenone (3.0%) and piperitenone oxide (41.5%). Ababeel birds or Martin have the ability to absorb 2000 mosquitoes so definitely they shows the digestive ability to absorb these insecticides chemical which shown the toxic nature against Human .On the other hand some special chemical compound found like Sodium Chloride(NaCl) and Potassium Chloride(KCl).

3. FURTHER IN HYDROXYCHLOROQUINE MEDICINE ALSO SHOW THE OPTION IN TREATMENT OF COVID 19. CHLORINE AND QUININE IS A KEY FACTOR IN HYDROXYCHLOROQUINE MEDICINE.

3.1 Side Effects of Hydroxychloroquine

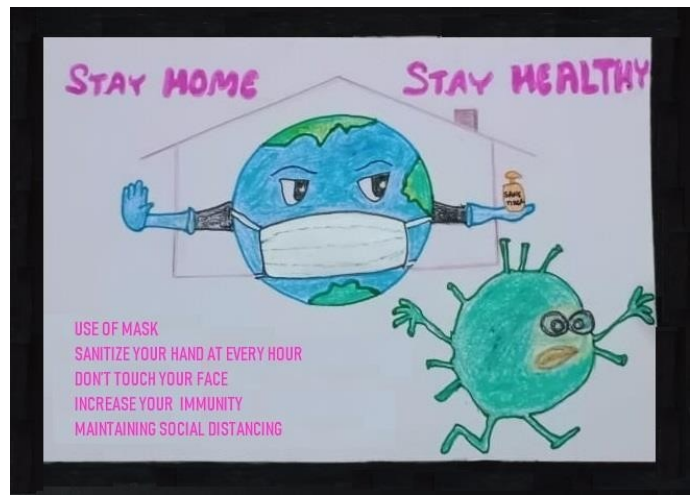

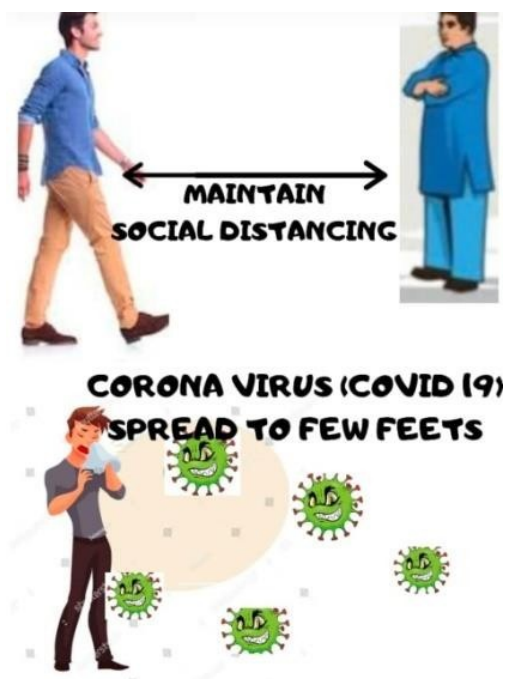

Side Effects of Hydroxychloroquine are concerned, so in India's context it will not apply to the level as it will be on other Countries (Pal et al., 2011). The people's diet and Immunity power are more important, the connectivity of the people to the favorable environment and process also reduces the side effects of Hydroxychloroquine, Another main reason is that the strengthening of vaccination in India, also reduces the seriousness of its side effects, which is why many Research Institutes in India have denied the serious side effects of this medicine in India's perspective (Blog Nutrition, 2018).

3.2 COVID-19 and INDIA

Not only the Citizens of India, but the Whole World is looking at INDIA, the lock-down by the Government of India has certainly been met, but there has been a lot of damage on the economy front. If scientifically viewed, India's hot environment will not allow the surface transfer of the virus or the viral transfer of the virus to be around 45 degrees during the summer., In the Community transfer, the government has decided to lock down the life cell, which is not able to transfer the Person to Person. The government of India's emphasis on taking India is that the people of India have more Immunity power. *Secondly*, Vaccination takes place in India. and *Thirdly*, urea is the base crop in India with nitrogen of about 46.6 percent. On the basis of all these things, India takes a little ahead of the World, but there are some negative things in which pollution is the main problem which helps in the growth of COVID-19, In addition to this, the intake of Smoking, Alcohol, etc. also enhances the infection of Covid-19, whose toxins present in the body, which is not consumed by the body, provides an armor to the COVID-19, which is why the Government or Other Countries Government Officials are repeatedly saying that smoking is more harmful in the Covid-19.

3.3 Corona and World Health Organization (WHO)

The world has been beyond comprehension by taking the activity of healthy composition on the Corona, which is not primarily due to the knowledge of the corona, that it is a new disease, The data and figure is not as much as it has ever been said about *Community transfer*, but the effects of which appeared only on human beings are the use of the *Sanitizer.Mask, Social Distancing* etc. considered effective for disease prevention, which was aimed at preventing Community transfers.

Well, I want to mention here some points which are as follow:

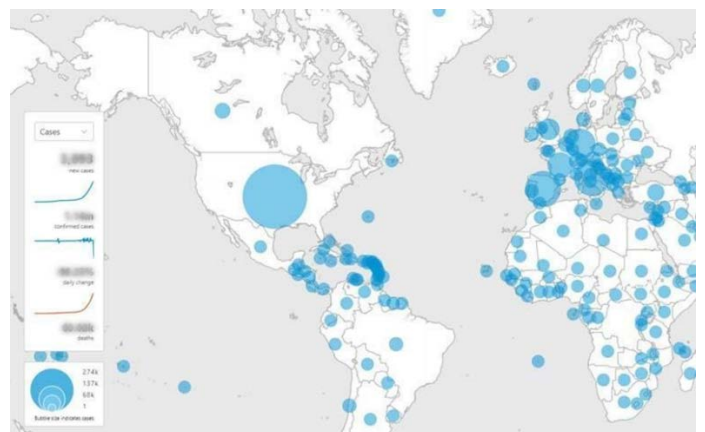

- (1) In the Corona virus, human traffic is a human transfer , but it has not shown its effect on water , land , etc . (except for some zoos in France or the United States).
- (2) Immunity is a major factor in Corona Virus if another person in contact with an infected patient has good immunity level, the effect of this virus will not be visible on it.
- (3) If the effect of Corona Virus is on the person and the Immunity level is high, the type of medicine like Hydroxychloroquine, Azithromycin, etc shows the effect on that person.
- (4) In some places, it has been seen that antibodies has also proved effective in treatment, though world healthy composition does not provide a simplification to it.
- (5) Apart from increasing the immunity level, the Hot water, Ayurvedic brew and Homoeopathy Medicines have also proved to be effective in this disease.
- (6) Even if chemical filter water is used in a water treatment plant, it can help to avoid the disease that will make the Human body infection level work, with 80-90 percents of the disease from dirty water.

4. WHO CORONA VIRUS (COVID 19) CURRENT UPDATES(GLOBALLY)

Sourced by: (WHO, 2019a)

5. VIEW DASH BOARD

Sourced by: (WHO, 2019b)

I would like to give some suggestions from the social contact from COVID-19 which are as follows:

(1) The ATM at the banking ATM has seen that the ATM's AC remains on and the ATM gate remains closed. God forbid any Corona infected patient will infect many people if he comes to the ATM contact, so I request you to always keep the gate of the ATM cabin open from which the air is being spread, it applies to other places and also for you to give instructions to the respective people.

(2) It has been seen that people are using soap by taking vegetables due to which chemical infections are reaching the body, so not using soap or soap, only Boiled luke warm water should be used which will not destroy the nutrients of vegetables and fruits and the infection will also be removed.

(3) Chlorine treated water should be encouraged to reduce the risk of infection if the method of Alum, Lime and Water treatment is to be reported to the common life, which may reduce the risk of infection during rainy period.

(4) Use soap of hand wash or Soap to avoid Skin Allergies.

6. CONCLUSION

COVID-19 is a Global challenge, and not a Single Country in the world can fight this Challenge alone, and we do not have much information to deal with COVID-19, and there are no clear guidelines to take up Virus Research, I have also written to the United Nations and Representatives of various nations to issue clear guidelines to those who have been working for the research of this Virus. And their inspection should be done in the same way as Biological Weapons and Nuclear Weapons, and the nation should issue a manual which has a guide lines for Virus testing, labs formation, and research limitation etc., as well as Virus prevention information, whether it is HIV Aids Virus or other Virus Virology Research is far behind us, but if the whole World get united we will be able to share our efforts and regarding information at bigger level to get through this Pandemic. There should be no business interests and profit-making providers, as well as Institutions like the United Nations and WHO will have to be able to create a Global Strategy Virus that is very essential at the moment. There is a lot of potential inside the *Martin Birds (Ababeel Birds) for the Virus*, but it is too early to say that it requires a lot of Research as well as effective elements

like *Chlorine, Quinine*, etc which are effective in the prevention of Corona Virus, as far as Chlorine is concerned, it can be used as a disinfectant which is used as a Water Treatment Plant.
